## Most Interesting parts in Shoezone Website

The website is designed with the intent of being pleasant and comfortable to the human (user's) eye. Non-loud and calm colors have been chosen for the design.

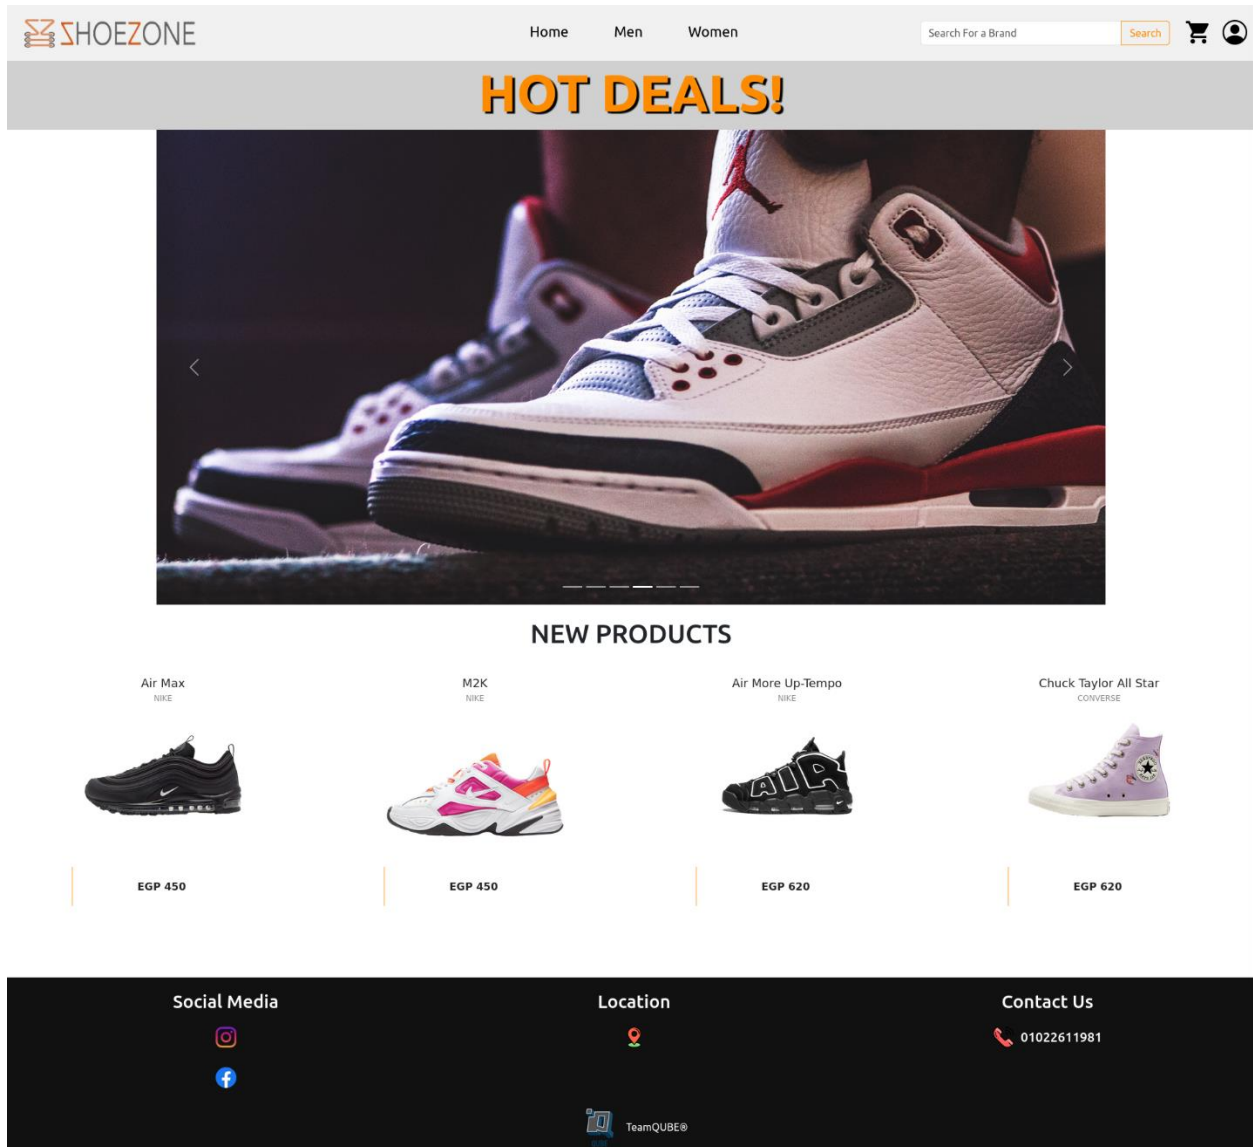

Ease of access is an integral part of the web application. The user can easily navigate through any desired part. Whether the user is on a laptop, a computer, or even a smartphone, the website will automatically adjust to fit the user's screen. If a user is on a phone, for example, the navigation bar will collapse into a menu button.

Soothing and pleasing animations are implemented across different sections of the website. One of the most interesting ones is when a user hovers over a shoe, all the sizes will be displayed upfront, making it easy to see which size is available for the said shoe.

Each shoe has its page that has a sleek modern design.

A footer is designed containing links that make it easy for the user to reach out to the owner and get in touch with him.
